Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
 - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
 - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
 - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 9/23/2004 has been entered. To clarify the record at this point in the prosecution, claims 1-30 are pending.

Response to Arguments

2. Applicant's arguments filed in the above-mentioned submission, with respect to the rejection of the claims based on Guire, have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, new grounds of rejection are made under 35 U.S.C. 112, 1st Paragraph, below.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

4. **Claims 1-30 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement.** The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

Claim 1 has been amended to recite "allowing the at least one crosslinking agent to migrate into the receiving layer." The originally-filed specification does not support this limitation. The specification merely discloses that the micro-spheres and the cross-linker are coated on/spread over the receiving layer. Disclosure of such an arrangement does not support the claimed migration between the two coating layers.

Claims 2-30 are rejected by virtue of their dependence from claim 1.

The examiner has carefully considered the originally-filed disclosure in making the above rejection. Should applicant traverse these rejections, the prosecution history would benefit from an express citation of those page and line number(s) of the spec., which applicant contends support(s) the limitation in question.

Conclusion

5. Claims 1-30 have been rejected above for containing a limitation not supported by the originally-filed disclosure. The examiner notes that the prior art neither teaches nor suggests the claims as-written. Specifically, the prior art neither teaches nor suggests the claimed process in which the steps are performed in the order recited, the cross-linking agent migrates into the receiving layer, thermal gelation is induced in the receiving layer with the cross-linking agent, and the carrier fluid is evaporated before such cross-linking is complete.
